

TranContext::abort

TranContext::commit

TranContext::get

TranContext::put

TranContext::remove

TranContext::get\_isolation\_level

```
graph LR; A[TranContext::abort] --> E[TranContext::get_isolation_level]; B[TranContext::commit] --> E; C[TranContext::get] --> E; D[TranContext::put] --> E; F[TranContext::remove] --> E;
```

The diagram illustrates a set of five methods from the TranContext class, each represented in a white rectangular box with a black border. These methods are arranged vertically on the left side of the image. From top to bottom, they are: TranContext::abort, TranContext::commit, TranContext::get, TranContext::put, and TranContext::remove. On the right side, there is a single, larger rectangular box with a gray fill and a black border, containing the text TranContext::get\_isolation\_level. Five blue arrows originate from the right side of each of the five white boxes and point directly to the left side of the gray box, indicating that all these methods are associated with or interact with the get\_isolation\_level property or method.
